

6 FUN FACTS

MONSTERA

DELICIOSA

THE FRUIT

Monstera has a fruit and it is delicious! This is why it is called "Monstera Deliciosa".

Some say the fruit tastes like fruit salad: a mix of passionfruit, mango, strawberry and pineapple!

WHAT ARE THE HOLES FOR?

The holes of the leaf exist to withstand the heavy rain and wind in tropical rainforests. This way, the elements of nature can pass through the leaves!

AERIAL ROOTS

Monstera has aerial roots that can be used to make baskets!

IN 1693

Charles Plumier discovered Monstera.

The Monstera plant has "muscles" between the leaf blade and stem of the plant. These help the plant to direct its leaves to the sun!
